SVG MONTHLY CLIMATIC BULLETIN

Issue 10 October 2026

HIGHLIGHTS: We are currently in the latter Atlantic Hurricane Season months. Residents of St. Vincent and the Grenadines are continuously advised to monitor official weather updates and forecasts. Be PREPARED! View various bulletins and outlooks issued by the Caribbean Regional Climatic Centre (Health, Agriculture, Heat Outlook etc.) Read the Caribbean Agro-Climatic bulletin of CariSAM and other national bulletins.

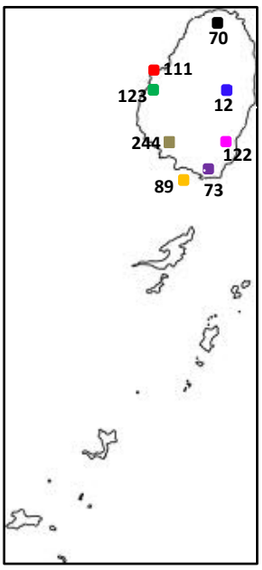

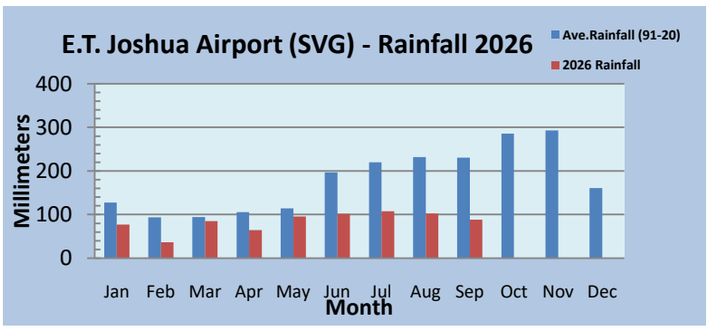

Fig 1: Rainfall Stations

September Summary

Saharan dust concentrations continued trending throughout most of September, resulting in slight to moderately hazy conditions, which occasionally reduced visibility and diminished air quality. A few tropical waves crossed and affected the island chain, bringing with them occasional showers, thunderstorms and brief periods of gusty winds across St. Vincent and the Grenadines. The total rainfall recorded at the **Argyle International Airport (A.I.A)** for August was **122.4 mm** (~4.81 inches). Island-wide, the highest monthly rainfall total was **244.3 mm** (~9.6 inches) recorded at the **Dallaway Station**.

KeyFig1	Station-Location	Rainfall (mm)
●	Argyle Int'l - Airport	122.4
●	E.T Joshua-Arnos Vale	88.7
●	Belle Isle	122.7
●	Rabacca	12.1
●	Belmont Agri.	111.3
●	Rivulet Climo.	72.5
●	Dallaway	244.3
●	Owia	69.8

Tables 1&2: September 2026: Rainfall across SVG.

The **highest maximum temperature**, 32.1°C, was recorded on the 19th; while the **lowest minimum temperature** was 22.2°C, recorded on the 14th.The **Average maximum temperature** was 31.1°C and **Average minimum temperature** was 24.4°C. **Average daily mean temperature** was 27.7°C.

The **maximum wind gust** for September is currently unavailable.

Forecast Information

KeyFig1	Station-Location	Temperature (°C)
●	E.T Joshua-Arnos Vale	30.7-31.1

Table 3:Oct –Nov – Dec 2026 usual range of temperature (between lower and upper threshold values)

National Temperature Outlook: Oct-Nov-Dec 2026 for SVG

- **Air Temperature:** Day and night time temperatures are predicted to be above the usual. Frequent and possibly intense episodes of heat stress likely over the upcoming months.
- **Sea Surface Temperatures (SSTs):** Sea surface temperatures around the Caribbean are warmer than usual.

KeyFig1	Station-Location	Rainfall (mm)
●	E.T Joshua-Arnos Vale	601.9-743.1

Table 4: Oct-Nov -Dec2026 usual range of rainfall (between lower and upper threshold values) .

National Rainfall Outlook:Oct-Nov-Dec 2026 for SVG

- Rainfall is likely to be the usual or below.
- There is a potential for drought conditions to develop across SVG during the upcoming months

Advisory Statements

Water: The general public should be aware that water availability may be disrupted during the passage of weather Systems. During these disruptions, residents are advised to store adequate quantities of water

Health: As warmer than usual temperatures are expected to continue in the upcoming months, the general public is advised to remain hydrated during warm days. Saharan dust events may persist; therefore, attention should be placed on monitoring and providing timely updates to reduce the risk of exacerbations of respiratory illness in vulnerable individuals. Additionally, because warmth and localized rain favours mosquito breeding, fogging operations should continue to mitigate vector-borne diseases.

Agriculture: Farmers should continue to pay attention to weather reports and bulletins and secure their equipment, crops and livestock as necessary. Irrigation measures should be practice as there could be periods of little to no rainfall. Due to the predicted warmer than usual temperatures, farmers are also advised to remain hydrated while working outdoors and provide adequate water and shading for seedlings and livestock during warm days.

Tourism: Outdoor activities could be disrupted at times during rainfall activity. During warm days, visitors should remain hydrated and be mindful to minimize skin exposure and wear sunscreen protection. Avoid the frequent rough sea swells during this time of the year. Visitors should also be aware of the frequency of Saharan dust episodes during this period as it can pose respiratory concerns.
